

TELEVISION STATIONS ARE MOVING CHANNELS. FIND OUT WHY.

By law, nearly 1,000 TV stations must move channels to make room for wireless services. Find out how you can help ensure viewers keep access to their local TV channels.

Wireless companies claimed a spectrum crisis was imminent and would disrupt mobile service for Americans.

In response, the FCC created a plan to encourage TV stations to give up their airwaves for wireless companies to buy.

Congress approved the plan.

The FCC implemented the first broadcast spectrum incentive auction.

TV stations were encouraged to sell their channels and go out of business.

More than 1,500 TV stations turned down \$38 billion to continue serving local communities.

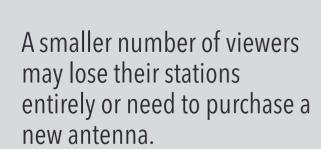

Nearly 200 stations sold their channels to wireless bidders. Many of these will go off the air in 2017.

These moves will start in 2018 and continue through at least 2020.

Now, nearly 1,000 TV stations that did not choose to participate must move to make room for wireless services.

77 million viewers that rely on over-the-air TV using an antenna must take action to keep their local channels.

Radio listeners may also be impacted if their station shares a tower with a TV station that is moving.

Help us ensure that your constituents are not left in the dark.
